Key Insights

Filtered insights for: Asia — All Years

Higher GDP = Lower Inequality

Countries with higher GDP per Capita consistently show lower Gini scores. Norway (Gini 26), Denmark (Gini 28), and Sweden (Gini 28) are the world's most equal nations — all with GDP above \$50,000.

[Page 2 — Scatter Plot](#)

Inequality Drives Crime

Brazil (Gini 53) and South Africa (Gini 63) both top the homicide rankings. A 1-point increase in Gini Index leads to a measurable increase in homicide rates globally.

[Page 3 — Homicide Analysis](#)

Unemployment Fuels Inequality

South Africa has 32% unemployment AND the world's highest Gini of 63. Countries with higher unemployment consistently show higher inequality — proven in Page 4 scatter plot.

Chart Info

Income Gap Analysis: Income gap refers to the difference in earnings between the richest and poorest people in society. It is measured using the Gini Index (0 = perfect equality, 100 = maximum inequality) and Palma Ratio. **WHY** does it happen? Because of unequal access to education, technology, land ownership, and inherited wealth. **HOW** is it shown? Page 2 Scatter Plot shows GDP vs Gini — higher GDP countries have smaller income gaps. **WHY** were these visuals chosen? Scatter plots are best for showing relationships between two variables.

Chart Info

Education Inequality: Education inequality means unequal access to quality education based on income, region, or gender. WHY does it matter? Education is the primary path out of poverty — countries with better education systems have lower Gini scores. Countries with Gini below 30 like Denmark, Sweden, Norway all have free high-quality public education. Countries with Gini above 50 like South Africa and Brazil have huge gaps between elite private and underfunded public schools.

Unemployment Fuels Inequality

South Africa has 32% unemployment AND the world's highest Gini of 63. Countries with higher unemployment consistently show higher inequality — proven in Page 4 scatter plot.

Page 4 — Impact Analysis

Global Inequality is Declining

From 43 in the 1990s to 40.60 today — global inequality has been falling. Power BI forecast predicts it will reach 35–38 by 2040 if SDG goals are achieved.

Page 5 — Forecast 2040

Africa Most Unequal Region

Sub-Saharan Africa consistently ranks as the most unequal region. South Africa (63), Namibia (59), Botswana (53) lead globally — a legacy of historical wealth concentration.

Page 1 — Global Overview

SDG Goals Lagging Behind

Latin America and Sub-Saharan Africa are furthest from achieving SDG Goals 11 and 16 — directly linked to their high inequality levels and low economic participation rates.

Page 6 — SDG Analysis

Activate Windows
Go to Settings to activate Windows

Chart Info

Economic Participation: Economic participation refers to how equally people can participate in the economy. WHY does unequal participation cause inequality? When women, rural populations, or minority groups are excluded from economic opportunities, income concentrates among a small privileged group. Page 4 Scatter Plot shows that countries with higher unemployment rates consistently have higher Gini scores.

Chart Info

Homicide Analysis: Intentional homicide is one of the strongest indicators of social inequality. WHY does inequality cause homicide? When income gaps are large, desperation and social exclusion leads to violence. Page 3 tracks 28 million homicides from 1990-2023 across 201 countries. The Area Chart shows homicides peaked around 2010. The Gender Donut shows 55% male victims. Brazil, India, Mexico top the chart.
